

# The Mercedes-AMG GT and GT Roadster

**AMG**  
DRIVING PERFORMANCE

# Born out of motorsport.

Hans Werner Aufrecht and Erhard Melcher laid the foundations for AMG in 1967, their minds set on racing success. They worked together to optimise engine performance and became actively involved in customer sport, where they were very soon competing against strong, established racing teams. In 1971 they duly won the legendary Spa 24-hour race, with the AMG 300 SEL 6.8 prevailing in its class. The courage and determination that drove the company's founders to venture the impossible and to work hard to achieve their aims are qualities that continue to characterise the spirit of AMG to this day.

# The “Driving Performance” philosophy. The DNA of champions.

Our ambition is to fulfil the dreams of performance enthusiasts. Our ideal is to exceed them. To do so means being prepared to go another step further. To engineer fascinating sports cars and performance vehicles that challenge the limits of physics. Proof of this drive to achieve absolute top performance is provided by many sporting successes in Formula 1, the DTM and with the Mercedes-AMG GT3 in the 24-hour race on the Nürburgring.

To take any car and to turn thrilling driving experiences into truly memorable AMG moments: that is the art of Driving Performance. Designed to give everything and extract even more – from every metre, every moment.

# Handcrafted by Racers.

From the Mercedes-AMG GT3 and GT4 racers to the Mercedes-AMG GT Roadster: the vehicles in the Mercedes-AMG GT family all share a common origin in motorsport. Their unmistakable sound, once heard, is never forgotten. Their unique design, once seen, is remembered for ever. Comprising the Mercedes-AMG GT, Mercedes-AMG GT S, Mercedes-AMG GT C and Mercedes-AMG GT R as well as the open variants Mercedes-AMG GT Roadster and Mercedes-AMG GT C Roadster, the Mercedes-AMG GT family represents the spearhead of our portfolio. Developed and built by motorsport enthusiasts, they carry the genes that define them as extraordinary sports cars: technology and engineering expertise direct from the race track. In other words, “Handcrafted by Racers”.

### High performers:

**Mercedes-AMG GT S**, AMG solarbeam, AMG cross-spoke forged wheels, painted matt black with a high-sheen rim flange, Exclusive nappa leather/DINAMICA microfibre upholstery in black with yellow contrasting topstitching, AMG matt silver carbon-fibre trim: page 10 ff.

**Mercedes-AMG GT C**, designo selenite grey magno, AMG 5-twin-spoke light-alloy wheels, painted black with a high-sheen finish, Exclusive STYLE nappa leather upholstery in macchiato beige with diamond-pattern quilting, AMG Exterior Carbon-Fibre package, AMG high-gloss carbon-fibre trim: page 18 ff.

**Mercedes-AMG GT R**, AMG green hell magno, AMG Performance 5-twin-spoke forged wheels, painted matt black with a high-sheen rim flange, Exclusive nappa leather/DINAMICA in black with yellow contrasting topstitching, AMG matt carbon-fibre trim: page 24 ff.

**Mercedes-AMG GT Roadster**, jupiter red, AMG 5-spoke light-alloy wheels, painted matt black with a high-sheen rim flange, Exclusive nappa leather/DINAMICA upholstery in black with red contrasting topstitching, AMG Silver Chrome Interior package: page 28 ff.

**Mercedes-AMG GT C Roadster**, designo diamond white bright, AMG 5-twin-spoke light-alloy wheels, painted titanium grey with a high-sheen finish, Exclusive STYLE nappa leather upholstery in saddle brown with diamond-pattern quilting, AMG matt silver glass-fibre trim: page 36 ff.

Unadulterated. Sports car performance.  
The Mercedes-AMG GT  
and Mercedes-AMG GT S.

Long bonnet, cockpit positioned far back, powerful rear end. The proportions of a sports car that is already an icon: the Mercedes-AMG GT S. Its tremendous thrust is powered by the 4.0-litre V8 biturbo engine that provides the centrepiece of a drive system systematically designed for dynamic handling. Thanks to a wide selection of dynamic driving modes and numerous intelligent assistance systems, this thoroughbred sports car is not only able to adapt to your temperament, but also to your daily life.

# Performance. Taken to the limits.

It was built to engender pure sports car feeling: the Mercedes-AMG GT S. Thanks to its AMG RIDE CONTROL sports suspension, adjustable in three-stages, it combines extreme agility with outstanding refinement. The ideal weight distribution of 47 to 53 percent between the front and rear axles is achieved for instance by the front mid-engine design and the positioning of the dual-clutch transmission in a transaxle configuration in the rear. This, in conjunction with the vehicle's low centre of gravity, is the reason for the sports car's excellent roadholding, even at high cornering speeds. The driving dynamics are improved even further with the optional AMG DYNAMIC PLUS package and active rear axle steering.

# GT S

A dynamic, low-angle shot of a yellow Mercedes-AMG GT S driving on a city street. The car is in the foreground on the left, moving towards the right. The background features a row of tall palm trees and a city skyline with various skyscrapers under a clear sky. The image has a motion blur effect, suggesting high speed.

# Accelerates. In record time.

A quick press of the starter button and straight away the pulse picks up speed. The 4.0-litre V8 biturbo engine with dry sump lubrication awakes. Put your foot briefly on the accelerator pedal and hear the powerful bass tones of the selectable AMG Performance exhaust system. The sound climaxes as the high-performance unit deploys its peak output of 384 kW (522 hp) to accelerate the Mercedes-AMG GT S from 0 to 100 km/h in just 3.8 seconds.

# Design. At its most perfect.

Pure dynamism, pure emotion: qualities that characterise the look of the Mercedes-AMG GT S. The harmonious interplay of pronounced contours and powerful lines defines its visionary design. The special AMG solarbeam paintwork further accentuates the car's exterior look. The long front section accommodates the 4.0-litre V8 biturbo engine, which is supplied with the air it needs via large cooling air intakes. The set-back position of the cockpit, the muscular shoulders and the rounded rear end in classic fastback design demonstrate in impressive style what a Mercedes-AMG sports car stands for: spectacular performance.

A silver Mercedes-AMG GT C is shown from the rear three-quarter view, driving on a racetrack. The track has a yellow and white curbing on the left. In the background, there is a modern building with a glass facade and a city skyline under a clear sky.

# Takes things to the next level of performance. The Mercedes-AMG GT C.

The Mercedes-AMG GT C allows you to experience AMG-typical performance in impressive style. The front splitter and the fins in the wings – both in carbon fibre – of the optional AMG Exterior Carbon-Fibre package add visual highlights to the distinctive front end. Aerodynamic performance is boosted by the dynamic design of the front apron, so helping to hold that stunning output of up to 410 kW (557 hp) on the road. The aluminium side walls are a particularly striking feature of the modified rear end and make the sports car a full 57 millimetres wider than the Mercedes-AMG GT, so creating space for larger wheels and a wider track. These two together improve traction and allow higher cornering speeds.

# GT C

# Turning corners into straights.

Anyone wishing to exploit their full potential on the road or on the track needs above all one thing: traction. Which is why the Mercedes-AMG GT C features an electronically controlled rear axle locking differential. The variable locking effect is optimally configured for a range of operating conditions, so elevating the physical handling limits to a new level. Further agility still is provided by the standard-specification active rear wheel steering system. Up to a speed of 100 km/h, the rear wheels are turned in the opposite direction to the front wheels, so ensuring that the vehicle handles more dynamically than ever when driving into or out of corners. Once the speed exceeds 100 km/h, the system turns the rear wheels in the same direction as the front wheels, with improved handling stability the outcome.

# Extends the physical limits.

A pure-bred sports car is not defined purely by the output of its engine, but by the accumulated effect of all its technical features. The ultimate in dynamic handling is ensured by the optional AMG DYNAMIC PLUS package. In addition to dynamic engine and transmission mounts, this features an even more firmly tuned AMG RIDE CONTROL sports suspension. AMG DYNAMIC SELECT offers four pre-set transmission modes as well as one individually programmable mode: "Comfort" (C), "Sport" (S), "Sport Plus" (S+) and "Individual" (I). The "RACE" mode takes the Mercedes-AMG GT C to sports-car level in terms of response and shift times, whereby the optional AMG Performance steering wheel in DINAMICA microfibre helps you to keep a grip on things.

# GT R

# Developed on the race track. Built for the road. The Mercedes-AMG GT R.

For decades now we have been measuring ourselves against the very best in motorsport. With every race, we acquire valuable expertise. So now we have condensed all our know-how into one vehicle: the Mercedes-AMG GT R. Everything about this vehicle adheres to the philosophy of “Design follows function”. Just for starters, the new jet-wing design of the front apron with its voluminous air intakes and front splitter in high-gloss black, together with the dynamically contoured side sill panels with high-gloss black inserts, emphasise the impression of width and make the vehicle seem to sit more solidly on the road. Broad wings, the large rear aerofoil with stepless manual adjustment of its single blade and the rear apron with double diffuser underpin this impression, while also improving the aerodynamics of this racing car with road-going credentials. A special feat of engineering: the all-new active aerodynamics profile. An exceptionally lightweight carbon-fibre element in the underbody modifies the airflow in such a way that the vehicle is more or less “sucked” down towards the surface of the road, so improving driving stability still further.

# Superb through corners. Superlative on the straight.

The Mercedes-AMG GT R was designed to take the racing line, which is where its stunning output of 430 kW (585 hp) comes ruthlessly to the fore. The determining factor in this performance is its significantly reduced weight, by comparison with the Mercedes-AMG GT S, achieved with the help of an intelligent mix of materials. Along with the aluminium and magnesium alloys used for the manufacture of the bodyshell, the car is built using carbon fibre, the ultra-lightweight and very strong material used in motorsport. For example in the front wings, for the roof or in the underbody. The AMG sports bucket seats likewise play their part in reducing weight, while also increasing lateral support for the driver. AMG

Traction Control is a system that stems directly from the world of motorsport. In the interests of optimum traction, this system allows individual adjustment of the slip on the driven rear axle. Also optionally available for motorsports enthusiasts: the AMG ceramic high-performance compound braking system and the AMG Track Package, including roll-over protection system, the inclusion of 4-point seatbelts and a larger-capacity fire extinguisher. And finally, when the impressive roar of the driver-selectable AMG Performance exhaust system is heard, no one is left in any doubt as to who rules the race track.

Intensity. The sky's the limit.  
The Mercedes-AMG GT Roadster.

You can feel the wind in your hair. Your eardrums are pulsing with joy. And your heart is racing with happiness. The Mercedes-AMG GT Roadster represents pure driving enjoyment. For all the senses. Its power presses you down into the optional climate-controlled AMG Performance seats. The selectable AMG Performance exhaust system, available as an option, roars into life at the touch of a button. And you soon leave everything in your wake.

# GT ROADSTER

The wind in your hair.  
A storm under the bonnet.

May the journey never end. That's what you'll be wishing, once you've taken your seat in the Mercedes-AMG GT Roadster. The spontaneous response of the 4.0-litre V8 biturbo engine is impressive from the outset. With an output of 350 kW (476 hp) and torque of 630 Nm, the engine accelerates the sports car from zero to 100 km/h in 4.0 seconds. And its top speed is only reached at 302 km/h. Such facts alone promise exclusive roadster feeling – which turns into pure, untrammelled joy when the roof is opened.

# On the road but floating above the clouds.

Every outing in the Mercedes-AMG GT Roadster has the potential to become an intensive experience, nurtured by the symbiosis between hallmark AMG Driving Performance and the unique sensation of driving under an open sky. The high-quality design of the interior, too, adds to the feeling of perfection. From the AMG Performance steering wheel with its silver-coloured shift paddles to the AMG sports seats with their extremely firm hold.

## Open to new perspectives.

Opens in just eleven seconds – at speeds of up to 50 km/h. That's how quickly you can get that exclusive open-air feeling in the Mercedes-AMG GT Roadster. The triple-layer fabric soft top is stretched over a magnesium, steel and aluminium frame and, thanks to its low weight, contributes significantly to the vehicle's low centre of gravity. The use of an aluminium crossmember including roll-over bars to provide additional protection is further evidence of the fact that we really think of everything when we're designing our cars – but of your safety most of all.

# GT C ROADSTER

# Pure intensity. The Mercedes-AMG GT C Roadster.

Showing the true meaning of maximum performance: a promise upon which the widened rear end of the Mercedes-AMG GT C Roadster delivers right from the outset. And that is further underpinned by the 4.0-litre V8 biturbo engine. With a peak performance of 410 kW (557 hp), 3.7 seconds is all it takes for the sprint from zero to 100 km/h. In addition, the active air control system AIRPANEL, a standard feature of all Mercedes-AMG GT models, improves the vehicle's dynamic handling by closing the vertical radiator louvres to reduce wind resistance. If there is an exceptional requirement for cooling, the louvres will open to allow the maximum amount of cooling air to flow through to the heat exchangers.

Performance that stays in the  
mind. And holds the racing line.

Barely here, but already an icon. The Mercedes-AMG GT C Roadster is a breathtaking-looking vehicle. It is an impression reinforced by the standard-specification AMG Performance exhaust system, which can be made to sound even sportier at the touch of a button. The standard-fit active rear wheel steering is particularly responsive in its reactions. At speeds of over 100 km/h the rear wheels steer in the same direction as the front wheels, so improving handling stability, for example during fast cornering. Should the speed fall under 100 km/h, the rear wheels steer in the opposite direction to the front wheels, making the sports car significantly more agile during cornering or spontaneous changes of direction.

# Open air without end.

Driving a roadster, if it's a Mercedes-AMG, can be great fun even when it's cold outside: thanks to AIRSCARF. This neck-level heating system, available as an option for the AMG sports seats and now, for the first time, also for the AMG Performance seats, is integrated into the area around the head restraints. The temperature of the air emitted can be set to any one of three levels, so ensuring optimum comfort at all times.

The image shows the front interior of a Mercedes-AMG car. The dashboard is black with four circular air vents. The center console is red leather with a carbon fiber trim. The steering wheel is black with red stitching. The seats are red leather with black stitching. The text "(S)pacemaker." is overlaid on the image.

## (S)pacemaker.

The cockpit. This car has the AMG DNA. The dynamic centre console rises gently up to the dashboard with its four striking air vents. The rev counter registers every surge into a new power dimension with consummate precision. The AMG Performance seats offer perfect lateral support in every bend. Hands on the AMG Performance steering wheel, speeding the car along via the shift paddles – this is the true feel of the road. Tailor-made for feel-good vibes with extremely high-class workmanship, finest leather and carbon fibre. Hand-crafted character.

## AMG. Up close.

Exquisite materials, elegant lines, exclusive colours: the interior of a sports car from Mercedes-AMG leaves nothing to be desired and no questions unanswered. Especially not the new appointments option of Exclusive STYLE nappa leather in macchiato beige, with which you can add a particularly elegant note to the interior.

A firm fixture of the tailor-made interior of any vehicle in the Mercedes-AMG GT family is the AMG DRIVE UNIT. Its controls in a stylised V8 arrangement provide your direct link to the road. Briefly nudging the AMG E-SELECT selector lever allows you to change

effortlessly between the transmission positions R, N and D. You can use the AMG DYNAMIC SELECT Controller to call up the predefined transmission modes of "Comfort" (C), "Sport" (S), "Sport Plus" (S+) and "Individual" (I). A further mode, "RACE", is available with the Mercedes-AMG GT S, the Mercedes-AMG GT C and Mercedes-AMG GT C Roadster, and the Mercedes-AMG GT R. According to the equipment package selected, these allow you to modify various parameters of your sports car in order to achieve

A detailed close-up of the Mercedes-AMG center console. The console is black with a carbon fiber texture and features several circular controls. On the left, there's a rotary selector with 'C', 'S', and 'RACE' settings. Next to it is a red-lit 'ENGINE START STOP' button. Further right are buttons for 'ESP', 'AMG RIDE CONTROL', and 'AMG Performance Exhaust'. A manual transmission shifter is visible on the right side of the console. The background shows the car's interior with circular air vents and a leather-upholstered seat with yellow stitching.

the best possible performance in every driving situation. The AMG DRIVE UNIT furthermore includes a button with which to select between the three levels of the ESP®, another for the manual adjustment of the AMG RIDE CONTROL sports suspension, plus one each for the manual transmission mode and the selectable AMG Performance exhaust system.

# Stellar performance.

Developed by motorsports enthusiasts: the extremely light and extraordinarily powerful high-tech units that make up the Mercedes-AMG GT engine family. Assembled by hand in Affalterbach according to the familiar philosophy of “One Man – One Engine”, these 4.0-litre V8 biturbo engines can deliver peak performance of up to 430 kW (585 hp). In the Mercedes-AMG GT R, for example, they can also deliver a maximum torque of as much as 700 Nm in the speed range between 1900 and 5500 revs. The two turbochargers are not mounted on the outside of the cylinder banks but between them, in what is known as the “hot inside V”. This optimises the supply of fresh air and ensures perfect flow conditions through to the exhaust turbochargers, resulting in improved response rates and reduced emissions. Meanwhile, the dry sump lubrication system ensures the supply of oil even under extreme lateral forces and means that the engine can be mounted lower within the body. This, too, serves just the one objective: to maximise your driving enjoyment.

# POWER

# Primed for performance.

The lower a vehicle's centre of gravity, the better its performance. In sports cars from Mercedes-AMG this is achieved through the installation of a low-set front mid-engine in a transaxle configuration. The result is a beneficial weight distribution of 47 to 53 percent between front and rear axles. The torque tube, as it is called – made out of carbon fibre in the case of the Mercedes-AMG GT R – provides a flexurally and torsionally rigid connection between the engine and the transmission. At the same time an extremely light and torsion-resistant drive shaft made of carbon fibre rotates inside the tube. This transfers the output from 4.0-litre V8 biturbo engine to the Mercedes-AMG SPEEDSHIFT DCT 7-speed sports transmission, which has been redesigned for the Mercedes-AMG GT R with a longer first and shorter seventh gear. A further specific characteristic of the Mercedes-AMG GT R is the use of uniball joints. These are extremely wear-resistant metal linking elements attached to the lower wishbones of the rear axle in a design that allows minimal play, so facilitating even more precise driving.

# PERFORMANCE

# High-performance brakes.

All Mercedes-AMG sports cars are delivered ex factory with a high-performance brake system. With internally ventilated and perforated brake discs all round, this offers excellent deceleration performance and precisely metered braking. The brake callipers on the Mercedes-AMG GT are coloured silver. The brakes on the Mercedes-AMG GT S and Mercedes-AMG GT C, adjusted to cope with the higher output, feature red brake callipers, while those on the Mercedes-AMG GT R are yellow, or also available in red as an option. Motorsport-standard braking is made possible by the AMG ceramic high-performance compound braking system. This ensures the shortest possible braking distance, a precise pressure point and very high fade resistance. As a further effect, the reduced rotating masses on the front axle provide for a more direct steering response, which significantly improves cornering capability. The brake callipers in this case are bronze in colour, and the system is available as an option for all vehicles in the Mercedes-AMG GT family.

# Raceframe.

Aluminium, magnesium, steel: these are the materials that go into delivering breathtaking sports car performance. In designing the bodyshell, we opted to use an intelligent mix of materials that would help deliver outstanding lateral and longitudinal dynamics, as well as superb steering precision. The basis is an aluminium spaceframe, which is combined with a front end made out of magnesium. Despite this lightweight design, the whole architecture of the frame of a Mercedes-AMG sports car is characterised by outstanding flexural and torsional rigidity that enables it to withstand all the deforming forces arising from the enhanced driving dynamics.

Use is also made here of carbon fibre, a very light and extremely strong material commonly used in motorsport. In the Mercedes-AMG GT R, for example, it is used as the material for the torque tube linking the engine and the transmission. The sports bucket seats that are also available for the Mercedes-AMG GT R, the optional AMG Performance forged wheels, the AMG Performance exhaust system with titanium silencer and tailpipe, and the optional AMG ceramic high-performance compound brake system are further essential lightweight construction measures that add up to make the vehicle the benchmark in its segment in terms of power-to-weight ratio.

# LIGHTWEIGHT

# Aerodynamics.

Even in its basic form, a sports car from Mercedes-AMG is designed to deliver optimum aerodynamic performance. This is made apparent by the front apron with AMG Panamericana grille, which optimises the airflow at the front end of the vehicle. In order to improve the car's dynamic handling still further, the Mercedes-AMG GT R also incorporates additional, active aerodynamic features. The underbody, for instance, incorporates an extremely light carbon-fibre element that automatically extends by about 40 millimetres at speeds of 80 km/h or more to change the airflow. The resulting Venturi effect "sucks" the car onto the road to ensure even better handling stability at high speeds.

The lower the wind resistance, the shorter the acceleration time to reach top speed: this is the principle employed by the AIRPANEL. Closing the 14 vertical louvres below the radiator grille improves the drag coefficient and helps to reduce lift. If added cooling of the engine becomes necessary, the louvres will open in under a second or so to allow maximum flow of cooling air through to the heat exchangers. In addition, static components such as Air Curtains in the front at the sides, a double diffuser and the manual, steplessly adjustable rear aerofoil ensure that the Mercedes-AMG GT R always achieves the best possible compromise between reduced wind resistance and increased handling stability.

Va: 250 km/h  
T: 20 °C  
Beta: 5 Grad

## AMG Aerodynamics package<sup>1</sup>.

Does it get any sportier than this? For example with a larger front splitter in matt black, which gives way to the flics on the front wheel arches. Additional flics on the side air intakes in the front apron, together with side skirt extensions in matt black, serve to emphasise the sense of forward thrust. The fixed rear aerofoil in high-gloss black provides the necessary downforce in every driving situation.

# AMG Carbon-Fibre package.

Powerful highlights emphasise a powerful appearance. The front splitter, the fins in the wing, the exterior mirror housings and the one-piece diffuser in the rear bumper are all made of carbon fibre. On the Mercedes-AMG GT R, Mercedes-AMG GT C and Mercedes-AMG GT C Roadster the side skirt extensions are also in carbon fibre, while a carbon-fibre rear aerofoil remains an exclusive feature of the Mercedes-AMG GT R. In brief: pure dynamism<sup>2</sup>.

<sup>1</sup> The AMG Aerodynamics package is not available for the Roadster models.

<sup>2</sup> There is a choice of two Carbon-Fibre packages for the Mercedes-AMG GT R:  
AMG Exterior Carbon-Fibre package I: front splitter, side fins in the air intakes in the wings,  
inlay in the side skirts plus the diffuser in the rear apron in carbon fibre.  
AMG Exterior Carbon-Fibre package II: exterior mirror housings and rear aerofoil in carbon fibre.

# AMG Exterior Chrome package.

The cool, deep transparent look of the chrome coating highlights selected elements to best advantage, for example the front splitter, the fins in the side air intakes, the fins in the wings and the roofline trim strip<sup>1</sup> in silver aluminium that outlines the upper edge of the side windows. In addition, on the Mercedes-AMG GT C and Mercedes-AMG GT C Roadster, chrome side skirt extensions ensure a polished appearance. The exclusive look is rounded off by the chrome trim strip in the diffuser.

<sup>1</sup> Available for the Mercedes-AMG GT, Mercedes-AMG GT S and Mercedes-AMG GT C only.

<sup>2</sup> Tinted glass not available for the Mercedes-AMG GT Roadster and Mercedes-AMG GT C Roadster.

# AMG Exterior Night package.

Make a statement. With elements in high-gloss black: from the front splitter, fins in the side air intakes and fins in the wings through to the exterior mirror housings and the trim strip in the diffuser on the rear apron. In addition, on the Mercedes-AMG GT C and Mercedes-AMG GT C Roadster, the side skirt extensions are finished in high-gloss black. Two black tailpipes add a powerful finishing touch. The triangular side windows and the rear window feature heat-insulating dark-tinted glass.<sup>2</sup>

# Wheels.

Whichever set you choose: AMG light-alloy wheels and AMG forged wheels do not only provide grip and outstanding dynamic handling, but also make you the focus of attention.

**RXP** | AMG 5-twin-spoke light-alloy wheels, painted matt black with a high-sheen finish, with 265/35 R 19 front and 295/30 R 20 rear tyres. For the Mercedes-AMG GT C and Mercedes-AMG GT C Roadster: 305/30 R 20 rear tyres.

**RXO** | AMG 5-twin-spoke light-alloy wheels, painted titanium grey with a high-sheen finish, with 265/35 R 19 front and 295/30 R 20 rear tyres. For the Mercedes-AMG GT C and Mercedes-AMG GT C Roadster: 305/30 R 20 rear tyres.

**658** | AMG cross-spoke forged wheels, painted titanium grey and polished, including fully integrated wheel bolt cover, with 265/35 R 19 front and 295/30 R 20 rear tyres. For the Mercedes-AMG GT C and Mercedes-AMG GT C Roadster: 305/30 R 20 rear tyres.

# Paintwork.

Every Mercedes-AMG has its own highlights. In terms of colour, too. As well as the “AMG green hell magno” paintwork that was exclusively developed for the Mercedes-AMG GT R and is only available for this vehicle, there is a choice of eleven further colours.

297 designo selenite grey magno

376 AMG green hell magno

# Roofs.

The choice of roofs in the Mercedes-AMG GT family is as exclusive as the cars themselves. For the Roadster models there are three variants for the soft-top: red, beige or black. The panoramic roof that is a standard feature of the Mercedes-AMG GT C is available as an option for the Mercedes-AMG GT and the Mercedes-AMG GT S. The carbon-fibre roof is available as standard with the Mercedes-AMG GT R only.

397 Carbon-fibre roof

747 Soft top in red

416 Panoramic roof

743 Soft top in beige

740 Soft top in black

# Standard equipment.

## Selection.

- 1 The right operating temperature at all times. With two climate zones and three climate styles, THERMOTRONIC automatic climate control ensures an individual atmosphere in the cockpit. The temperature can be controlled separately for driver and front passenger.
- 2 The equipment feature Active Braking Assist gives the driver a visual warning if the distance to the vehicle in front is too small. An acoustic warning sounds when a danger of collision is identified. The system is also able to support the driver's braking action, or to reduce the speed by means of autonomous braking intervention, should the driver fail to respond to the warning.
- 3 Fun at the wheel at the touch of a button: simply activate the button for the KEYLESS-GO starting function to experience the ultimate in high performance.
- 4 The AMG sports seats with ARTICO man-made leather/fabric upholstery in black feature more pronounced side bolsters for optimum lateral support. Integrated head restraints plus "AMG" badges in the seat backrests add a further sportily exclusive touch.
- 5 Hands firmly on the reins. Or rather on a 3-spoke AMG Performance steering wheel in black nappa leather with silver chrome bezel and silver-coloured aluminium shift paddles.
- 6 Your shoes, too, deserve perfect grip: AMG floor mats.
- 7 See and be seen better. In addition to their distinctive visual appeal, the LED High Performance headlamps offer a broad distribution of light, a daylight-simulating colour temperature and a low energy consumption level.

# Optional equipment.

## Selection.

- 1 Bring on the bends. The nappa leather upholstery in silver pearl/black combines a sporty look with the use of high-quality materials.
- 2 Blind Spot Assist forms part of the Lane Tracking package. When a vehicle is detected in the blind spot, a red triangle lights up in the exterior mirror. If the driver overlooks this warning and operates the direction indicators, an acoustic warning is additionally sounded.
- 3 The “AMG Track Pace” app turns your smartphone into your personal racing engineer. This enables lap/sector times or even videos to be recorded and analysed.
- 4 Getting on track. The AMG door sill panels in carbon fibre conjure up a race-track atmosphere as soon as the doors are opened.
- 5 Top-class on the audio front, too. The Burmester® high-end surround sound system – only available in conjunction with COMAND Online – offers unrivalled sound quality with ten high-performance speakers, an 11-channel DSP amplifier with a total output of 1000 watts, and precisely coordinated electronic and acoustic elements.
- 6 AIRSCARF. The neck-level heating system for driver and front passenger makes open-top motoring a pleasure, even when the outside temperature is low. The system acts rather like a scarf, wrapping the warm air emanating from the adjustable air outlets in the head restraints around the head and neck area.

# Dimensions.

Whichever vehicle you choose, it will always have the ideal dimensions for a sports car.

Mercedes-AMG GT (S)

Mercedes-AMG GT C

All dimensions in millimetres. The dimensions shown are mean values and apply to standard-specification, unladen vehicles.  
\* Figures apply to the Mercedes-AMG GT S.

<sup>1</sup> Details of rated power and rated torque in accordance with Directive (EC) No. 595/2009 in the currently applicable version. <sup>2</sup> The figures shown for the fuel consumption and the CO<sub>2</sub> emissions were obtained in accordance with the prescribed measuring process (§2 Nos. 5, 6, 6a Pkw-EnVKV (German Ordinance on Fuel Efficiency Labelling) as amended. The figures are not based on an individual vehicle and do not constitute part of the product offer; they are provided solely for purposes of comparison between different vehicle models. Figures vary depending on wheels/tyres. <sup>3</sup> Valid within the European Union only. <sup>4</sup> Determined on the basis of the measured CO<sub>2</sub> emissions, taking into account the mass of the vehicle. <sup>5</sup> Figures in accordance with Directive 2007/46/EC in the currently applicable version. <sup>6</sup> Figures according to Directive 92/21/EC in the currently applicable version (kerb weight with fuel tank 90 percent full, with driver, 68 kilograms, and luggage, 7 kilograms) for standard-specification vehicles. Optional extras and accessories will generally increase this figure, with a corresponding reduction in payload. [www.mercedes-benz.com](http://www.mercedes-benz.com)

Climb aboard one of the vehicles in the Mercedes-AMG GT family and experience exciting sports-car performance.

**Mercedes-Benz is one of the founding partners of the “Laureus Sport for Good Foundation”.**

Since the foundation was established in 2000, Mercedes-Benz has been supporting and promoting the aims and values of this worldwide non-profit-making programme: to use social sports projects to improve the lives of children and young people who are disadvantaged or suffering from illness. Laureus has become a fundamental element of Mercedes-Benz's social responsibility. Every new Mercedes is an ambassador embodying these values. In buying a Mercedes you are supporting the “Laureus Sport for Good Foundation”.

**Please note:** changes may have been made to the product since going to press (30.08.2017). The manufacturer reserves the right to make changes to the design, form, colour or specification during the delivery period, provided these changes, while taking into account the interests of the vendor, can be deemed reasonable with respect to the purchaser. Where the vendor or the manufacturer uses symbols or numbers to describe an order or the subject of an order, no rights may be derived solely from these. The illustrations may include accessories and optional extras which are not part of standard specification. Colours may differ slightly from those shown, owing to the limitations of the printing process. This brochure is distributed internationally. It provides a general indication of the range of models, features, optional extras and/or colours available in various countries. Some of the models, features, optional extras and/or colours shown may not be available in your country or may only be available in a different specification. Additionally some models, features, optional extras and/or colours may only be available in combination with others. For current and more specific information in relation to the range of models, features, optional extras, colours and/or services available in your country, and their pricing, you should contact your nearest authorised Mercedes-Benz Passenger Car Dealer.

**Take-back of end-of-life vehicles.** We will be glad to take back your Mercedes-AMG GT for environment-friendly disposal in accordance with the end-of-life vehicle directive of the European Union (EU) – even though that day lies a long way off.

A network of vehicle take-back depots and dismantlers has been established to make it as easy as possible for you to return your vehicle. You can leave it at any of these points free of charge and, by so doing, make an important contribution to completing the recycling process and conserving resources.

For further information about the recycling and disposal of end-of-life vehicles and take-back conditions, please visit your national Mercedes-Benz website.
